

ORCA Event Playbook and Demand Uplift Data

Document Type: Event Context | Version: 3.0 | Generated: May 2026 | Owner: ORCA Supply Chain AI

■ **PRIORITY RULE:** This document contains planning rules and context only. All live values (costs, contacts, balances) must be fetched from orca.db via MCP tools. The database is the single source of truth for all facts.

Section 1 — UAE Retail Event Calendar

All 10 UAE retail events affecting demand planning. demand_uplift_pct is the historical average uplift for affected categories. event_uplift_factor = 1 + (demand_uplift_pct / 100).

ID	Event Name	Type	Start Date	End Date	Duration (days)	Uplift (%)	Uplift Factor	Planning Lead (days)	Affected Categories
EVT001	Ramadan 2025	Religious	2025-03-01	2025-03-29	29	180%	2.8×	60	Grocery,Dates,Beverages
EVT002	Eid Al Fitr 2025	Religious	2025-03-30	2025-04-02	4	220%	3.2×	45	Seasonal,Personal Care,Grocery
EVT003	Eid Al Adha 2025	Religious	2025-06-06	2025-06-09	4	150%	2.5×	45	Grocery,Meat,Seasonal
EVT004	UAE National Day	National	2025-12-02	2025-12-03	2	80%	1.8×	30	Seasonal,Beverages,Flags
EVT005	Back to School	Academic	2025-09-01	2025-09-15	15	120%	2.2×	45	Stationery,Bags,Electronics
EVT006	Dubai Shopping Festival	Retail	2025-01-15	2025-02-15	32	90%	1.9×	30	Electronics,Home,All
EVT007	Summer Season	Seasonal	2025-06-15	2025-08-31	77	60%	1.6×	30	Beverages,Electronics
EVT008	New Year 2026	Festival	2025-12-28	2026-01-02	6	70%	1.7×	20	Beverages,Seasonal
EVT009	National Day Prep	National	2025-11-15	2025-12-01	17	40%	1.4×	15	Flags,Seasonal
EVT010	Winter Tourism Peak	Seasonal	2025-11-01	2026-02-28	120	50%	1.5×	45	All

Red cells = uplift ≥200% (CRITICAL planning priority). Amber cells = uplift ≥100% (HIGH planning priority).

Section 2 — Category Uplift Matrix by Event

Historical demand uplift percentages by category and event. Use this matrix to validate event_uplift_factor fetched from the database.

Category	Ramadan	Eid Al Fitr	Eid Al Adha	DSF	Back to School	UAE Natl Day	Summer Season	Natl Day Prep
Grocery	180%	—	150%	60%	—	—	—	—
Dates	280%	220%	180%	—	—	—	—	—
Beverages	180%	190%	160%	60%	—	80%	60%	—
Electronics	40%	—	—	90%	120%	—	—	—
Personal Care	60%	60%	—	70%	80%	—	—	—
Seasonal	—	350%	—	—	—	80%	—	40%
Home	—	—	—	90%	—	—	—	—
All categ.	—	—	—	60%	—	—	50%	—

Section 3 — Planning Lead Time Rules by Event

Event	Standard Planning Window	Category-Specific Rules	Pool Activated
Ramadan 2025 (180% uplift)	60 days before March 1	Dates/Ajwa: 75 days ahead (sea freight) Grocery: 60 days ahead Dates qty: 300% of normal	CP002 Ramadan Surge Buffer
Eid Al Fitr 2025 (220% uplift)	45 days before March 30	Plan alongside Ramadan — same order extended All Critical stores stocked before Eid eve Expedite must arrive 5 days before start	CP002 / CP005
Dubai Shopping Festival (90% uplift)	30 days before January 15	Electronics: 80 days ahead (TechLine 54-day lead) Home: 65 days ahead Only Dubai stores directly affected	CP004 Electronics
Back to School (120% uplift)	45 days before September 1	Electronics: order by June 17 Tier-1 stores near residential areas: 2× uplift Class B/C Electronics move significantly	CP004 Electronics
UAE National Day (80% uplift)	30 days before December 2	Seasonal items: order 90 days ahead (Dragon Imports 60-day lead) Patriotic merchandise with UAE colours	CP005 Seasonal
Summer Season (60% uplift)	30 days before June 15	77-day duration — continuous monitoring required Beverages: increase 60% throughout season Multiple reorders needed during long event	CP001 / CP003

Section 4 — Demand Calculation Formulas

Formula	Calculation	Example
Projected Demand (with event)	$\text{avg_daily_demand} \times \text{event_uplift_factor} \times \text{event_duration_days}$	$10 \text{ units/day} \times 2.8 \times 29 \text{ days} = 812 \text{ units}$ (Ramadan Grocery)
Projected Demand (no event)	$\text{avg_daily_demand} \times \text{effective_lead_time}$	$10 \text{ units/day} \times 54.5 \text{ days} = 545 \text{ units}$ (Electronics standard)
Event Uplift Factor	$1 + (\text{demand_uplift_pct} \div 100)$	Ramadan 180%: $1 + 1.80 = 2.80$ Eid Al Fitr 220%: $1 + 2.20 = 3.20$
lead_time_too_late (with event)	$\text{effective_lead_time} > \text{days_until_event_start}$	TechLine 54.5 days vs Ramadan in 40 days → lead_time_too_late = True
lead_time_too_late (no event)	$\text{effective_lead_time} > \text{days_to_stockout}$	Lead 54.5 days vs stockout in 30 days → lead_time_too_late = True
